Simple. All you have to do is put code similar to the following in the `_cm_post_geData()` method:

```
foreach ($rows as $rownum => $rowdata) {  
    if ($rowdata['id'] == 'whatever') {  
        $rows[$rownum]['selected'] = true;  
    } // if  
} // foreach
```

It would be a waste of time removing the select box from the screen as there would be no way to mark the row as selected.
