I had not realised that you expected the data to be formatted BEFORE the call to `_cm_listView_header()`. Is this what you want?

Which is more logical to you? Perform the formatting on the row data BEFORE or AFTER the call to `_cm_listView_header()`? This would mean that if you want any changes made in `_cm_listView_header()` to be formatted then you will have to do it yourself.

It would be a simple change to make - just move line 22 to below line 25.
