Subject: Creating a List 2 transaction between multiple databases

---

I have two databases that I have imported in the same sub system. I am trying to create a 'List 2' transaction between two tables, where each table belongs to a different database. I have already established a parent-child relationship between these tables.

The issue I am facing is: in the 'Generate PHP' screen for the List 2 transaction I am not able to use the 'Outer Database' pop-up to select a different database.

In summary:

Subsystem A has two databases ADB and BDB.

ADB has table AP\_table

BDB has table BC\_table

BC\_table has a child relationship to the AP\_table

When defining the List 2 transaction for BC\_table I am not able to choose ADB using the 'Outer Database' popup.

I am having this issue with version 1.79 of Radicore.

Is this by design?
