Column->Update and set as popup field with task id results in an update SQL statement that produces fatal error:

Fatal Error: PostgreSQL: ERROR: 42703: column "list1" does not exist LINE 1: ...ntrol='popup', optionlist=NULL,task\_id=h\_supplier(list1), fo... ^ LOCATION: errorMissingColumn, src\backend\parser\parse\_relation.c:2655 (# 42703)

SQL query: UPDATE dict\_column SET control='popup', optionlist=NULL,task\_id=h\_supplier(list1), foreign\_field='supplier\_id', revised\_date='2014-06-14 07:52:10', revised\_user='EKL' WHERE database\_id='hotel' AND table\_id='expense' AND column\_id='supplier\_id'

It appears that ...task\_id=h\_supplier(list1)... is missing the single quotes. For full error details, please see attached pdf file.
