That is odd. I noticed it will work only when 'import column' is used for a table for the first time. If you try re-'import column' again for any table, it will generate this error.

Please take a look at this <http://>

www.postgresql.org/message-id/20140204081310.GC10459@defunct.ch where it is stated that

in PostgreSQL Quote:When you

explicitly set the columns to NULL the default values don't apply. You

have to leave them out or to explicitly request the default values and Quote:Specifying NULL

explicitly means that is what you want and if the

column is constrained to be non-NULL the system will be unable to fulfill

your request and throw an error.
