Hi Tony,

I worked through the tutorials and through the article 'A Flexible Tree Structure' to implement my own tree structure. It is very interesting to see how you can build such flexible structures.

Now my question: Is it possible to build a tree structure and a tree view with other (existing) tables with cascading primary keys? I would like to show a hierarchy where I can use the occurrences of existing tables. If I insert the levels and nodes in the three tables x_tree_type, x_tree_level and x_tree_node I would have to do twice.
