Greetings,

I am a PHP newbie and have just installed radicare on my local Win XP/Apache/PHP 5/Postgre system.

When I attempt to login I get the following error:

This application has encountered an unrecoverable error
The following has been reported to the administrator:

2006-12-09 13:38:44

Fatal Error: Object of class pgsql could not be converted to string (# 4096).

Error in line 49 of file 'C:\Data\Website\radicare\includes\dml.pgsql.class.inc'.

Script: /radicare/menu/logon.php

Remote Address: 127.0.0.1

Request URI: /radicare/menu/logon.php

I suspect that I have not edited the config.inc file correctly.
Here are some relevant config.inc file lines:

\$GLOBALS['dbms'] = 'pgsql'; // database engine is PostgreSQL
\$GLOBALS['dbhost'] = 'localhost';
\$GLOBALS['PGSQL_dbname'] = 'radicare';
if (eregi('^localhost|desktop|laptop\$', \$_SERVER['localhost'])) { // this is for my PC
 \$GLOBALS['dbusername'] = 'harris';
 \$GLOBALS['dbuserpass'] = 'grAce';
 \$GLOBALS['dbprefix'] = null;
}

I do not have a 'PGSQL_dbname'='radicare' (I have created the 'menu', 'workflow', etc. databases.
But I do have an system
odbc data source named 'radicare'.

Any recommendations?

Thanks, JWH
