
Subject: subsystem export does not cover menu tasks for roles' task access

The subsystem export files "...menu_export.sql" do not include mnu_role_task table records where the task type is 'MENU'.

I worked around this problem by replacing this line: \$data =
\$taskobj->getData_raw("subsys_id='\$subsys_id' AND task_type='PROC'");from function
_exportSQL in file mnu_subsystem_s01.class.inc, with this:\$data =
\$taskobj->getData_raw("subsys_id='\$subsys_id'");
