Subject: [SOLVED] Re: Bug with 'require_once' file path
Posted by kong on Thu, 10 Mar 2016 22:45:20 GMT

You are right, there are 2 ways for this to work:
1. Configure include.subsystem.inc file for each subsystem as described here:
http://www.tonymarston.net/php-mysql/infrastructure-faq.html #faq86.
2. The alternative of using 'subsystem/table.class.inc' in the call to getInstance() works fine too.

Thanks for pointing that out!
