Not sure if this is a bug.

I have some business logic in _cm_pre_insertRecord (\$rowdata)

Tried to do update statement like

```
'UPDATE '. $table . ' SET rgt=rgt+2 WHERE rgt>='. $parent_rgt;
```

So, I did:

```
$where_parent_rgt = 'rgt>='. $parent_rgt;
```

```
$replace_parent_rgt = 'rgt=rgt+2';
```

```
_dml_updateSelection ($where_parent_rgt, $replace_parent_rgt);
```

Apparently, the method keeps updating rgt to 0 for the affected records.

When I tested with

```
$replace_parent_rgt = 'rgt=12';
```

all affected records were updated correctly with rgt = 12.

Seems like _dml_updateSelection is not able to deal with expressions with operators.

Is this a bug? If it is not, do you currently have a function that allows me to do the above in the framework?
