I can now generate the records which I want to insert. Everything works fine so far. But if I select some records and want to insert them in the child database I get the following error message:

Fatal Error: Uncaught exception from Error, message = Call to a member function array\_update\_associative() on null, code=0, file=C:\xampp\htdocs\radcore\includes\std.add5.inc, line=140, file = C:\xampp\htdocs\radcore\htm\training\_plan\_anwesenheit(add5) .php  
line = 22  
function = require  
(# 256)

Error in line 463 of file 'C:\xampp\htdocs\radcore\includes\error.inc'.

PHP\_SELF: /radcore/htm/training\_plan\_anwesenheit(add5).php

What did I forget in my code or what did I wrong?
