Subject: Re: add5 - Data Area Posted by htManager on Mon, 22 Jul 2019 08:13:22 GMT View Forum Message <> Reply to Message

As you mentioned, I do not need to delete rows in an add5 pattern. If I want to insert an additional single record, I do this with an add2 menu task.

Now my question: I select the records in the _cm_getInitialDataMultiple (\$fieldarray) function where I get records from a foreign table via the line "\$data = \$dbobject->getData (\$where);" I tried to show them in a different order but I failed.

Is there the possibility to use \$orderby or is the only possibility to sort the \$fieldarray before it will be returned?
