Tony, I don't know what it is wrong with my application. I initialized the picker directories in the same way you did in the prototype applications. But it fails.

I looked in xample and in survey and in both application the icons are not correct shown in the picker screen and you can't them choose. See attached file.

I changed the include directory to that from version 2.13.0 and everything works fine. Can it be that there is a problem with the new version 2.14.0?

CHOOSE NULL

A screenshot of a web browser window displaying a local application. The address bar shows the URL "localhost/radicore/xample/x_person(filepicker).php?csrf_id=5e8203726a45". The page header includes a user profile icon and the name "Juergen Hartz". Below the header is a navigation menu with tabs labeled "Person", "Person (Multi5)", "Option", "Person Type", "Tree Type", and "test_autoincrement". A breadcrumb trail reads "Home»Prototypen»Example System»List Person»Update»Choose Picture". The main content area has a blue header titled "Choose Person Picture". Underneath are two buttons: "Upload Picture" and "Search". There is a large, empty light blue rectangular area below the buttons. At the bottom left, there is a button labeled "CHOOSE NULL".
