If I change the value in the dropdown list the value of a numeric field will be increased by a factor of 100. From 50,00 to 5000,00 and so on, each time I change the dropdown field value. In the \$postarray in `_cm_updateFieldArray()` the value is still correct. Seems to come from the comma ',' instead of the '.'. Do I have to change something in \$fieldspec in `_cm_changeconfig()` or somewhere else?
