Yes, I know. I thought that if I set NULL as default in the table structure, this would be made automatically. I attached a picture of my table structure.

If I execute "INSERT INTO test_datum SET `id`='4', `test_datum`=NULL" instead of "INSERT INTO test_datum SET `id`='4', `test_datum`="" the record will be inserted correctly without "0000-00-00".

Is there a setting to handle a blank value " explicitly as NULL?

The screenshot shows a database management interface with a toolbar at the top containing buttons for 'Anzeigen', 'Struktur', 'SQL', 'Suche', 'Einfügen', 'Exportieren', and 'Importieren'. Below the toolbar is a table structure view for a table named 'test_datum'. The table has two columns: 'id' and 'test_datum'. The 'id' column is of type 'int(10)' and is marked as a primary key. The 'test_datum' column is of type 'date'. The 'Null' column for 'id' is 'Nein' and for 'test_datum' is 'Ja'. The 'Standard' column for 'id' is 'kein(e)' and for 'test_datum' is 'NULL'. The 'Aktion' column for each row contains links for 'Bearbeiten', 'Löschen', and 'Mehr'.

#	Name	Typ	Kollation	Attribute	Null	Standard	Kommentare	Extra	Aktion
<input type="checkbox"/> 1	id	int(10)			Nein	kein(e)			Bearbeiten Löschen Mehr
<input type="checkbox"/> 2	test_datum	date			Ja	NULL			Bearbeiten Löschen Mehr
