Yes, I know. I thought that if I set NULL as default in the table structure, this would be made automatically. I attached a picture of my table structure.

If I execute "INSERT INTO test_datum SET `id`='4', `test_datum`=NULL" instead of "INSERT INTO test_datum SET `id`='4', `test_datum`="" the record will be inserted correctly without "0000-00-00".

Is there a setting to handle a blank value " explicitly as NULL?

The screenshot shows a database management interface for a table named 'test_datum'. The interface includes a breadcrumb trail: 'Server: 127.0.0.1 » Datenbank: him » Tabelle: test_datum'. Below the breadcrumb is a menu with buttons for 'Anzeigen', 'Struktur', 'SQL', 'Suche', 'Einfügen', 'Exportieren', and 'Importieren'. The main area displays a table structure with the following columns: '#', 'Name', 'Typ', 'Kollation', 'Attribute', 'Null', 'Standard', 'Kommentare', 'Extra', and 'Aktion'. There are two rows of data:

#	Name	Typ	Kollation	Attribute	Null	Standard	Kommentare	Extra	Aktion
<input type="checkbox"/>	1 id	int(10)			Nein	kein(e)			Bearbeiten Löschen Mehr
<input type="checkbox"/>	2 test_datum	date			Ja	NULL			Bearbeiten Löschen Mehr
