Tried searching for '%menu%' in Roles using 'Task Id' field, 0 results returned.

When I did that in 'Description', there are some results returned.

This cannot be a bug. With the "Search Role" screen there is no method of inputting "%menu%" for task\_id as there is no text box for task\_id. There is, however, a popup control for the start\_task\_id field which allows you to select a specific value from the database, but there is no way to enter a pattern such as "%menu%".

Pardon me misleading you.

Its after selecting a Role in List Role then click on Task Access

I cannot reproduce this fault. If I put "%menu%" in the task\_id field then records with "%menu%" in the task\_id field are selected. If I put "%menu%" in the task\_desc field then records with "%menu%" in the task\_desc field are selected. Note that the record counts for these two searches may be different as different fields are being searched. I can see no bug at all.

Attached are some screen shots. My observation is, it only returns those which has been selected only even though 'undefined' has been selected.

I see what it is doing. When the sql SELECT statement is constructed it has  
mnu\_role\_task.task\_id LIKE '%menu%' instead of mnu\_task.task\_id LIKE '%menu%'  
I will fix this in the next release.
