Please see an attached file with an error using ADD1 transaction, it happens when I try to send an error message using this->error

This is my validation code:

```
function _cm_validateInsert ($rowdata)
// Valida el datos del registro
{
    $cedrucpas = $rowdata['cedularucpas'];
    if (!$this->validarCedula($cedrucpas)) {
        $this->errors['cedularucpas'] = getLanguageText('e0001');
    }
    return $rowdata;
} // _cm_validateInsert
```

The attached shows the Radicore Application Error

Any ideas why it happens? Please your help!

I found the error, I was using an spanish character (é) on language\_text.inc file.

Thanks anyway!

That is strange as the framework is supposed to accept UTF-8 characters the language.txt files. I shall investigate.

I have investigated this problem, and I can confirm that UTF8 characters in any of the language\_text.inc files will be displayed properly provided that you save the file as UTF8 and not ASCII or something like Windows 1252.

I have tested this by putting some UTF8 characters into one of my standard text files, then loading that message into the screen. The attached screen shot shows the difference between saving the file as UTF8 and non-UTF8.
