I read that the Times font supports the sigma character. Do I have to include an additional library?  
Or do I have to do something else?

Where did you read that the Times font supports the sigma character? That is a unicode character, so you need a font that supports unicode.

If you take a look at GREEK CAPITAL LETTER SIGMA (U+03A3) Font Support you will see that the code for the SIGMA character is actually `\u{03A3}`

I don't know where is my fault.

```
<?php
require('c:\xampp\htdocs\radicore\includes\tcpdf\tcpdf.php') ;
$pdf = new TCPDF();
$pdf->AddPage();
$pdf->SetFont('times', '', 16);

or
$pdf->Cell(40, 10, 'Großes Sigma: ' . "\u{03A3}"); // Funktioniert mit Unicode
$pdf->Output();
?>
```

If I define a field in my report nothing will be shown. - `array('field' => 'sigma', 'width' => 10, 'x' => 0);` - `$sigma = "\u{03A3}";`  
If I define a label with value `"\u{03A3}"`, a ? will be shown. - `array('label' => "\u{03A3}", 'width' => 10, 'x' => 0);`

The value sigma will also be shown correctly if I output it in my class file with  
`var_dump("\u{03A3}");`

I tried running a test with the sigma character on my PC using the Times font and it displayed as '?' which is incorrect.

I tried running example\_008.php in the TCPDF download as this demonstrates the ability to print

examples/data/utf8test.txt file and it printed as it should. I noticed that the font used in that test was 'freeserif', so I changed the font in the RADICORE test to 'freeserif' and the sigma character displayed correctly. I even tried the 'freesans' font, and that displayed correctly as well.

It would appear that the 'Times' font will not display this character, so you will need to switch to a font that does.

Thank you very much for the information. I will change this for myself. Now I know that and, above all, how to do it.
