Subject: PDF - drawing with lines

Hi Tony,

is it possible to generate PDF output with lines where the start and end of the line are determined by x/y coordinates?

I know that in the *.report.inc file the array('text' => ", 'style' => 'rule_title', 'width' => '25%'); draws a horizontal line.

But I haven't read anywhere whether such a line can be issued. I have attached a picture.

if this is not possible, do you have any idea how I could make this happen?

This is not possible within RADICORE as the PDF module was specifically designed to deal with the reporting of data and not the drawing of pictures. For that I'm afraid you will have to write your own code.

I suspected that. Thank you very much for the confirmation.

Instead of drawing lines I would have another solution:

To do this I would have to put a field over an image. However, the field is displayed either above or below the image. Depending on how I fill out the structure file.

\$structure['multi10']['fields'][1][] ... \$structure['multi10']['fields'][2][] ...

Is it possible to layer one on top of the other? I have attached a drawing.

No, it is not possible to take two images and layer one over the other. Maybe you could try merging the two images into a single image in a separate process, and then displaying that single image.

Can you give me some advice on how best to do this?

Is the GD library a suitable way to do this?

Actually there are not two images, but a background image and a (or more) data field(s).

I found another solution to my problem. I have defined fields where I output a page as a boundary. That's enough for now.

I do the same with the 2nd picture.

I attached a screenshot.

I'm glad that you have found a solution by looking at the problem from a different angle.
