I've configured radcore to use this date format: dd/mm/yyyy  
I think there is a bug around line 85 in std.datevalidation.class.inc

With the debugger I found that when updating a date field it executes this code in line 89:  
\$result = \$this->verifyDate(\$regs[3], \$regs[1], \$regs[5]);  
So it passes the month as day, and therefore date verification fails.

This is the data I got with the debugger:  
\$this->date\_format=dd/mm/yyyy  
\$input=24/01/2009  
regs[1]=24  
regs[3]=01  
regs[5]=2009
