Tony,

When adding a new record in these pages

[http://www.tonymarston.net/sample/person\\_add.php](http://www.tonymarston.net/sample/person_add.php)  
[http://www.tonymarston.net/sample/pers\\_type\\_add.php](http://www.tonymarston.net/sample/pers_type_add.php)  
[http://www.tonymarston.net/sample/option\\_add.php](http://www.tonymarston.net/sample/option_add.php)  
[http://www.tonymarston.net/sample/tree\\_type\\_add.php](http://www.tonymarston.net/sample/tree_type_add.php)

if at least one required field is left blank, after pressing the SUBMIT button  
the following error message is generated:

Fatal error: Call to undefined function removeFromScriptSequence()  
in /home/tonymars/public\_html/sample/std.table.class.inc on line 3249

Thanks.

PS. If all required fields are filled the record is inserted.

Whoops!

I'll release the updated files as soon as I get home.

Tony,

In this sample page

[http://www.tonymarston.net/sample/person\\_add.php](http://www.tonymarston.net/sample/person_add.php)  
the file picker  
[http://www.tonymarston.net/sample/x\\_person\(filepicker\)\\_x](http://www.tonymarston.net/sample/x_person(filepicker)_x)

is not working.

It simply displays a blank page.

Perhaps it is not a bug but a security restriction.

In that a case a message explaining the restriction would be helpful.

Thanks again.

Fixed. Somehow I had used an old copy of one of the files.
