
Subject: Connection login issue

Perhaps I do not understand how Radicore login/security works...

On my development machine (localhost) I can connect and develop no problem.

In \includes\dml.mysql.class.inc in

function connect (\$dbname=null)

I have changed line 152 (shown below) to include the mySQL username and password

```
$dbconn = mysqli_connect($dbhost, username, password);
```

Is this the correct way to use Radicore?

Problem: when I go to another machine and access Radicore from the browser with

<http://xxx.xxx.xx.xxx/radicore/index.html>

I get the logon screen but when I click Logon I get "application has encountered an unrecoverable error"Fatal Error: eregi() [function.eregi]: REG_BADRPT (#1049).

Error in line 49 of file 'C:\xampp\htdocs\radicore\includes\dml.mysql.class.inc'.

I am not sure how to fix this.

Can you advise, please?
