Subject: POPUPs do not display

My database has independent tables GRANTS and STAFF and dependent table GRANT_STAFF. I have setup a task that lists (LIST1) staff working on a grant on the Radicore navigation bar and allows selection for editing the GRANT_STAFF record.

My problem: The grant and staff are stored as numeric codes and I want a popup for each. But the codes are NOT being converted (i.e.the number codes are being displayed). Can you give me any idea where to solve this problem?

1. I setup relations from GRANTS and STAFF to GRANT_STAFF.
2. In the GRANT_STAFF table, columns grant_pk and staff_pk (primary keys to the 2 tables) have Control = POPUP, Foreign Fields points to the text field I want to display in the GRANTS or STAFF table. Task ID points to "div_grantstaff_grant2(popup2)" and "div_grantstaff_staff2(popup2)".

Here is a little code from grant_staff.dict.inc

```
$fieldspec['grant_pk'] = array('type' => 'integer',
    'size' => 5, 'minvalue' => 0, 'maxvalue' => 65535,
    'pkey' => 'y', 'required' => 'y',
    'control' => 'popup',
    'task_id' => div_grantstaff_grant2(popup2)',
    'foreign_field' => 'title_full');

$fieldspec['staff_pk'] = array('type' => 'integer',
    'size' => 5, 'minvalue' => 0, 'maxvalue' => 65535,
    'pkey' => 'y', 'required' => 'y',
    'control' => 'popup',
    'task_id' => 'div_grantstaff_staff2(popup2)',
    'foreign_field' => 'lname');

// parent relationship details
$this->parent_relations[] = array('parent' => 'grants',
       'parent_field' => 'grant_pk',
       'fields' => array('grant_pk' => 'grant_pk'));

$this->parent_relations[] = array('parent' => 'staff',
       'parent_field' => 'staff_pk',
       'fields' => array('staff_pk' => 'staff_pk'));
```
