Hi,

I'm trying to use Radicore to manage existing database.  
But I have found something interesting while I'm creating a LIST2 pattern.  
Let's say I have two table A and B. A is senior to B and I have created a relationship between them.  
When I creat LIST pattern for A or B. Both data shows up fine.  
But when I open LIST2 screen of A, there is not B data at the bottom. But I know there are some B data for A.

Interestingly, if I ADD a B for A then it show up under A.

I'd like to know why this happens.  
I guess Radicore keep track of something internally!

What do I need to do to see existing B data under A?  
Is there data import functionality in radicore?

Thanks.
