When I input with NEW row with Serbian(Latin) everything is good, I see special characters Å¡Ä‘Å¾Ä•Ä‡Å Ä•Å½ÄŒÄ†, but when I return control on previous screen program jump on login screen without error massage.

Next time when I run LIST1 for this table I see special characters in specified table, but process repeat when I try to escape from this screen, program jump on the login screen. Only way to solve the problem is to access directly to MySQL and change it.

Other php applications like wiki which I have, work properly with Serbian(Latin)

My release is 1.34.00 (beta), you remember you sent me to solve problem with dbprefix.

This problem I had also when I try last year in previous release of Radicore, but I was in process of learning Radicore concept.

In PHP default_charset is UTF-8

Status of Database :

mysql> status
----
mysql Ver 14.12 Distrib 5.0.45, for pc-linux-gnu (i486) using readline 5.2

Connection id: 9
