participante\_id is a field of the record that is being inserted. It is an autoincrement and the primary key of the table, so now I see why it's null. Anyway I tried adding this code:

```
if (is_null($fieldarray['participante_id'])){
    $part = new participante;
    $part->sql_select = 'participante_id';
    $participante_id = $part->getData("catsalut='".$fieldarray['catsalut']."'");

}
else{
    $participante_id = $fieldarray['participante_id'];
}
```

to

```
function _cm_post_insertRecord($fieldarray)
{
    require_once 'classes/entidad.class.inc';
    $entidad = new entidad;
    $entidad->sql_select = 'entidad_id';
    $entidad_id = $entidad->getData("nombre='".$SESSION['role_id']."'");

    require_once 'classes/part_ent_xref.class.inc';
    $part_ent_xref = new part_ent_xref;

    if (is_null($fieldarray['participante_id'])){
        $part = new participante;
        $part->sql_select = 'participante_id';
        $participante_id = $part->getData("catsalut='".$fieldarray['catsalut']."'");

    }
    else{
        $participante_id = $fieldarray['participante_id'];
    }

    $insert_array['participante_id'] = $participante_id;
    $insert_array['entidad_id'] = $entidad_id[0]['entidad_id'];
    $insert_array = $part_ent_xref->insertOrUpdate($insert_array);

    if ($part_ent_xref->errors){
```

```
$this->errors = $part_ent_xref->errors;  
return $fieldarray;  
}  
return $fieldarray;  
}
```

but I get a null value in \$fieldarray['catsalut'], catsalut is a field of the record that is being added.

Your help is really appreciated.
