Your $_SERVER['DOCUMENT_ROOT'] is shown as "/home/httpd/vhosts/augustin.it/httpdocs", therefore you need the following in your include path:

1) /home/httpd/vhosts/augustin.it/httpdocs/radicore/includes
2) /home/httpd/vhosts/augustin.it/httpdocs/radicore/menu
3) /home/httpd/vhosts/augustin.it/httpdocs/radicore/audit
4) /home/httpd/vhosts/augustin.it/httpdocs/radicore/workflow

I note on our entry for (1) you have a leading '.' before '/home', which makes the path relative, not absolute.

Note also that you may wish to place the 'includes' directory outside of your web root so that it cannot be accessed from any browser.
