I only added this code to test:

```
$this->sql_select = null;
$this->sql_from   = null;
$this->sql_groupby = null;
$this->sql_having = null;
$this->sql_from   = $this->_sqlForeignJoin($this->sql_select, $this->sql_from,
$this->parent_relations);
```

And it's generating a wrong FROM clause:

```
FROM equipo CROSS JOIN participante
LEFT JOIN part_equipo_xref ON (equipo.equipo_id=part_equipo_xref.equipo_id AND
participante.participante_id=part_equipo_xref.participante_id)
[B]part_equipo_xref LEFT JOIN participante ON
(participante.participante_id=part_equipo_xref.participante_id)[/B]
```

The code in bold wasn't included in the originally generated sql.
