Subject: Re: How to filter by a parent field in a link1 transaction Posted by AJM on Fri, 18 Jul 2008 10:07:00 GMT View Forum Message <> Reply to Message

Whoops, my mistake. The link object requires special processing which is bypassed with the code I gave you. You should change the line

\$this->sql\_from = \$this->\_sqlForeignJoin(\$this->sql\_select, \$this->sql\_from, \$this->parent\_relations);

to

\$where\_str = \$this->\_sqlAssembleWhere(\$where, \$where\_array);

This should generate the correct sql statement, which you can then modify.
