I found out that if the description field of each dropdown had the same name, then the description wasn't displayed, that was the problem I had.

For example:

Category table:
category_id
name

Sport table:
sport_id
name

Then if in the 'team' table you define two fields as dropdowns to this tables, as both have the same description name, the name was not displayed. I changed the field names to:
Category table:
category_id
category_desc

Sport table:
sport_id
sport_desc

and it worked.
