The file name cannot be omitted with the current release, but I've updated my code to make this possible. Please see the attached file. You have two choices:
(1) Insert 'notext' => 'y' into the $fieldspec array for the image.
(2) Insert 'notext' => 'y' into the report struture file for the image.

Please note that the attached file contains ALL pending updates, so please read the notes in radicore/radicore-2008-xx-xx.txt
