When you use a popup the only custom methods which are called are as follows:

```
_cm_popupCall()  
_cm_popupReturn()  
_cm_post_popupReturn()
```

This is described in <http://www.tonymarston.net/php-mysql/infrastructure-faq.html> #faq17b.

The `_cm_pre_updateRecord()` method has nothing to do with popup processing, and is only used when a record is being updated.
