Tony,

I've tried stepping through with my debugger, but I'm not confident enough to correctly interpret what I am seeing...

std.output2 seems to be correctly processing the value given to it by the popup screen called as a passthru task. The report runs correctly. From here the prev script and task seem to be correctly set to the list2 transaction I am expecting (lines 88 and 89). Then line 96 executes and unsets the output2 task. The task then exits (but not by calling any other function), but so does the debugger, so I can't figure out where control is going. From an application point of view I am still seeing the popup on the screen.

Is there any other advice you can provide?

Thanks,

Graham
