No problem!

```
function isThisAGoodName($tablename)
{
    //short version requires PECL extension
    //return runkit_lint ("<?php class $tablename {} ?" . ">");

    // "long" version
    $temp_file = tempnam(sys_get_temp_dir(), 'rad');
    file_put_contents($temp_file, "<?php class $tablename {} ?>");

    $result = `php -lq $temp_file`;

    unlink($temp_file);
    return 0 === strpos($result, "No syntax errors detected");
}
```
