session_start() is populating $_SESSION but I don't know how to tell whether it is the correct data or not.

The redirect to the logon screen is occurring due to the if statement at line 978:
if (basename($PHP_SELF) == 'help.php' OR is_True($GLOBALS['batch'])) {
this causes $script_id to be set to $logon_screen at line 996.

I'm not familiar with basename. What does this do?
