Aha,

This now explains it then.

It would appear in my attempts to overcome some of the quirks of the Oracle SQL engine, so as to circumvent some of the errors I was encountering earlier, I have inadvertently broken the functionality of another component.

Whilst I have correctly populated the column data for the appropriate tables, this is not being "picked up" in the overview of tables (list), although if you select the table and press the 'Columns' button, you can see all the columns have been successfully imported.

Sadly, I'll have to go and see if I can re-engineer some of the earlier sections of code so as to make the Oracle specific bits work but not break this!

I should have noted the missing columns totals there earlier!

Many thanks for pointing me there.

T.
