Aha i need to create the databases MANUALLY.

that worked after that i created the tables that did not work one typo in the last line off audit-schema.sql
") ENGINE=MyISAM;" engine should be type".

NOW I HAVE A NEW PROBLEM.
my internet provider allows me to create multiple databases but the Plesk user interface only allows for each database a DIFFERENT user. and not for one user multiple databases.

Radicore requires one database user for all databases?
