I have a table in a mysql database, this table has an integer field wich allows NULL values, when I update this field with 0 (zero) value it takes the NULL value instead of Zero, with this behavior the dropdown list wich works with this field, shows nothing instead of the item associated with the zero value.
I'm solving the problem defining the fields as NOT NULL WITH DEFAULT; but it doesn't seem a real solution for me.
Please your suggestions or comments.
