There is nothing wrong with your config.inc file, and I cannot reproduce this fault on my PC.

The problem lies somewhere in the `_loadDatabases()` method inside `'dict_dataBase_s01.class.inc'` where it looks for database names with the prefix, then strips off the prefix for internal use. All database names which appear in the dropdown list should not include the prefix.

You need to step through with your debugger to see what the code is doing with the prefix.
