I have modified the system so that it will allow any number of 'OR-split (Explicit)' entries. They must all have a pre-condition except the last one (when sorted by place_name), as this will be treated as the default if none of the other conditions evaluates to TRUE.

The attached file also contains a small fix to 'std.table.class.inc' which prevented the case from being marked as closed when a token was moved to the END place.

Let me know if this works OK.
