Well by Add_a_person or add_a_student i meant the same thing.Any "add" thing which is a task in my workflow. And i set it to manual.
Now i have two doubts -
1.What exactly will happen if i set Add_a_Student as "automatic". Since, anyway I have to fill in it the fields manually (which are say roll_num,course_id).
2.If this is set to manual, then when i click on add a new student, and fill in the necesaary fields roll_num and course_id, since it is manual it appears on my home page as a workflow item to be "added", when it has been already added. So here is where I get stuck. I do not know how to make it move forward!
