Part of that code is now redundant and should be:

```
if ($encrypt_flag == true) {
    foreach ($rows as $row => $rowdata) {
        // insert dummy field to say that data is currently encrypted
        $rows[$row]['pswd_is_encrypted'] = true;
    } // foreach
} // if
```

Attached is an updated version of the file.
