Part of that code is now redundant and should be:

```
if ($encrypt_flag == true) {  
  foreach ($rows as $row => $rowdata) {  
    // insert dummy field to say that data is currently encrypted  
    $rows[$row]['pswd_is_encrypted'] = true;  
  } // foreach  
} // if
```

Attached is an updated version of the file.
