Not really sure what you are asking me here.

Everything is displaying correctly in the list1 screen, and I have modified the column headings as per the FAQ. They are displaying correctly. When I select a row and go to the list2 screen, the columns, which are now shown as fields in the outer section, are the original (unmodified) labels. I want to know how I can apply the same modification to the labels when in an outer section of the screen, in the same way you can for the inner section.
