You can only change the column labels when the labels appear above multiple rows of data, i.e. when you have 'columns' and 'rows'.

In a LIST2 screen the 'outer' entity is displayed using a 'detail' layout (single record) while the 'inner' entity is displayed using a 'list' layout (multiple records). The LIST layout provides rows of data with column labels on top, while the DETAIL layout provides field labels and field values side by side.

It is not possible to change field labels in a 'detail' layout, only column labels in a 'list' layout.
