Tony,

In page
http://www.tonymarston.net/php-mysql/output-to-pdf.html
the link to
http://www.php.net/manual/en/ref.info.php#ini.max-execution- time (line 74)
redirected to
http://php.net/manual/en/ref.info.php#ini.max-execution-time
is broken.

The page ref.info.php exists but the anchor #ini.max-execution-time does not exist.

Please note that the PDF document is constructed in memory, so avoid giving it overly large amounts of data to process. This may cause the PHP process to

run out of memory, or it may run out of <a

href=" http://www.php.net/manual/en/ref.info.php#ini.max-execution- time">time.

Perhaps a link to
http://php.net/manual/en/function.set-time-limit.php
would be appropiate.

In page
http://www.tonymarston.net/php-mysql/functions-and-variables .html
the link to
http://uk.php.net/reserved.variables#reserved.variables.serv er (line 4996)
is broken.
It can be replaced with
http://php.net/reserved.variables

These are also broken links (the fragments do not exist)
http://www.php.net/manual/en/reserved.variables.php#reserved .variables.post (lines 1972, 2015, 3082, 4713, 4721, 4805)
http://www.php.net/manual/en/reserved.variables.php#reserved .variables.cookies (line 4955)
http://www.php.net/manual/en/reserved.variables.php#reserved .variables.session (lines 5458, 5492)

Thanks.
