Tony,

In page

<http://www.tonymarston.net/php-mysql/output-to-pdf.html>

the link to

<http://www.php.net/manual/en/ref.info.php#ini.max-execution-time> (line 74)

redirected to

<http://php.net/manual/en/ref.info.php#ini.max-execution-time>

is broken.

The page [ref.info.php](#) exists but the anchor [#ini.max-execution-time](#) does not exist.

<p>Please note that the PDF document is constructed in memory, so avoid giving it overly large amounts of data to process. This may cause the PHP process to

run out of memory, or it may run out of time.</p>

Perhaps a link to

<http://php.net/manual/en/function.set-time-limit.php>

would be appropriate.

In page

<http://www.tonymarston.net/php-mysql/functions-and-variables.html>

the link to

<http://uk.php.net/reserved.variables#reserved.variables.server> (line 4996)

is broken.

It can be replaced with

<http://php.net/reserved.variables>

These are also broken links (the fragments do not exist)

<http://www.php.net/manual/en/reserved.variables.php#reserved.variables.post> (lines 1972, 2015, 3082, 4713, 4721, 4805)

<http://www.php.net/manual/en/reserved.variables.php#reserved.variables.cookies> (line 4955)

<http://www.php.net/manual/en/reserved.variables.php#reserved.variables.session> (lines 5458, 5492)

Thanks.
