The login screen is supposed to create an entry in the \$_SESSION array before jumping to the next screen, but if the next screen cannot find this entry then it immediately jumps back to the login screen. If this entry is missing from the \$_SESSION array it usually means that the entire array is empty as it is using a different session_id from what the login screen used. Your htaccess file should contain the following:

```
php_value session.use_cookies 1
php_value session.use_only_cookies 1
php_value session.use_trans_sid 0
```

Do you have a debugger installed? Can you see what the \$_SESSION array contains when the menu.php screen fires up?
