The login screen is supposed to create an entry in the `$_SESSION` array before jumping to the next screen, but if the next screen cannot find this entry then it immediately jumps back to the logon screen. If this entry is missing from the `$_SESSION` array it usually means that the entire array is empty as it is using a different `session_id` from what the login screen used. Your `htaccess` file should contain the following:

```
php_value session.use_cookies 1
php_value session.use_only_cookies 1
php_value session.use_trans_sid 0
```

Do you have a debugger installed? Can you see what the `$_SESSION` array contains when the `menu.php` screen fires up?
